

smart.Views 1.00

Tired of developing web views? Use the Smart.View plug-in to create nice looking web views without any coding.

(Für Lotus Notes Version 5, 6, 7 und 8)

-  Your view has to fit the CI ?
-  Different colours for different situations (e. g. administrative views) ?
-  Different actions in different views (e. g. no deleting in administrative views) ?
-  You do not want to create a 115 different \$\$ViewTemplates for every view ?
-  Your X-application Look & Feel should be identical ?

Functionalities

GMI KG · Die Gesellschaft für Migration und Integration

-  Store the Look & Feel in a setup-document instead of your Source-Code
-  Bind multiple views to the same UI
-  Add additional columns for selecting, opening or deleting documents
-  Example-agent for handling selected documents from the web (e. G. export to MS Excel)
-  Keep control about any cell and any letter in your view without access to the design
-  Copy & Paste of 3 design elements → Plug & Play

\$\$ViewTemplateDefault (View)

- Will be used to open any view in the web
- Evaluates the view-name and opens the dedicated profile document
- Reads Layout- and action-information from the profile-document
- Hands over selection-information (marked documents) to an agent

View Profile-document

- Contains CSS-Information for Look & Feel of the view (see above)
- Contains information about the included actions for this view
- Additional columns for selection / opening / deleting or editing could be generated
