

Ante.Clavis 2.50

Get an overview from your existing Domino infrastructure based on facts instead of assumptions.

13.04.2008

Installation manual

Ante.Clavis is a Notes database that has to be installed on a client workstation or on a server in your infrastructure.

Icon	Name	Beschreibung
	Ante.Clavis	Ante.Clavis stores the results of your analysis in a notes database.

Please perform the following steps to set up Ante.Clavis correctly:

Signing the templates

The templates have to be signed with an ID which is able to write files to the local disc.

Creation of database from the templates

Due to the fact that the design of the system has been hidden – the template has to be placed in the root-directory of the server. Create an instance of AnteClavis on your computer / server. The AnteClavis light template will be used by the system itself when you try to export analyse results to a single database.

Enter the licence key and update the configuration documents

After the creation of the databases you have to update a bunch of setup-documents.

The following steps are necessary to complete this task:

- 1) Update your licence key and language settings:
- 2) Activate your language (english)
- 3) Update the framesets
- 4) Update the configuration settings

Ad 1) Update the licence key and language

Please open the document „Config“.

Go to the register „Multi-Language“ and make sure that the settings from the graphic on the right hand-side are available.

Enter the licence key send to you in the field „Licence“.

Save and close the document.

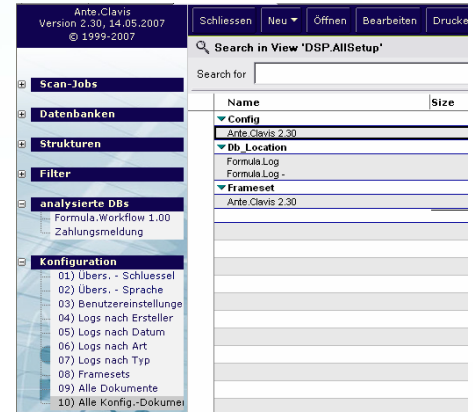

Ad 2) Activating your language (english)

Go to the view „Translation (Keys)“:

Start the 5th action from your left handside (or the action „Manage language“). Afterwards run the agent “09 User / 02 set user language”

Close the database and open it again.

If the language is not displayed properly please go back to this view and SAVE each document once !!

Update the lanugage and licence

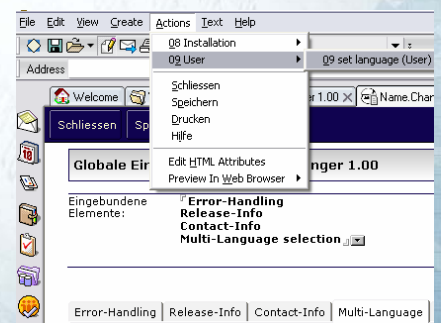

Open the document « Config » and go to tab „multi language“

Update your licence

Initialisierung der Sprache

Run the agent „09 User / 02 set user language“

Ad 3) Update the frameset:

Go to the view: „08) Framesets“

Open the document, switch to the edit mode and save the document once. Afterwards you can close the document again.

Ad 4) Update the configuration settings

Please go back to the view „10 all config documents“ and open again the document „Config“

Update the settings in the area „Efforts“ according to the skills of yourself or your development team.

Go to the area „Settings“ in the field „Configuration“. Here you are able to enter “Text-values” to identify configuration documents in your scanned databases (like “Setup”, “Config” ...).

When performing an analysis all documents will be searched for these values and if available.. will be exported as potential “configuration documents”.

For example if you are entering: “.nsf”

Then all documents having a database name in one of their fields will be identified and shown to you in your result set.

In the field „exclude“ you are able to list all databases / directories which should be excluded from performing an analysis.

e. g. “names.ntf” excludes the template of your address-book from the scan..

e. g. “mail” ignores all databases in your mail-directory of your server.

Vergabe der Zugriffsrechte

All user of this database need at least Reader-Access and the role „User“.

Group	Role	Rights
Your Server	User	Manager
Administration-Group	User	Manager
User (doing analyses)	User	At least author-access and rights to delete documents and create private or public folder
Alle User	User	At least Reader-Access

Installation of smart-icon

With the smart-icon in the toolbar you are able to scan any opened database without creating a profile, first.

This icon can simply be clicked as soon as the “Database to scan” is opened.

The icon is contained in the bookmarks.nsf – and can be installed by clicking:

“09 – User – 02 Create ToolBar Icon”

System requirements :

Ante.Clavis 2.50 runs with Lotus Notes release 6 and 7.
